REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art does not provide for, nor suggests providing for an automatic probing system which sends a plurality of probing configuration signals using a plurality of different protocols over a plurality of virtual channels utilizing a plurality of spawned threads to monitor each sent signal. The signals are sent approximately simultaneously in the sense that the end user notices no perceived delay, or that any delay is used to wait for the return of one signal before the transmission of the next signal. A plurality of probing signals is sent, and then the spawned threads are used to listen for the proper response to those particular signals on the virtual channels. The configuration is done automatically, without user intervention at any point in the process. The closest prior art is Romohor, however Romohor does not disclose the use of spawning a plurality of threads and using them to monitor each of the virtual channels for responses, and the user is queried for confirmation of the choice. For these reasons, in conjunction with the other limitations of the independent claims, puts this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
